BRAKE BLEEDING ADVANCE SYSTEM

**BRK
600**

BRK600 is the newest, universal brake bleeder especially designed for a professional use. BRK600 is equipped with a robust integrated and independent pump for the extraction of used oil.

Working even on hard-to-access trays is made easy using the long 7 meter spiral hose. An integrated filter protects the pump from dirt particles and various residues. Changing the brake oil on a professional level also includes washing the reservoir. For this the old, exhausted and dirty oil is extracted from the fluid reservoir.

The extracted oil is collected in the transparent 5 liter tank. BRK is equipped with a second high quality pump for injecting new oil.

BRK600 is also equipped with a continuous pressure regulator up to 4.2 Bar. The pressure regulator has a safety lock to avoid unintentional manipulations.

The bodywork of BRK600 is particularly robust, as well as all the details such as wheels, hoses and connectors, for a particularly intense and continuous use.
